- ★★★★ 7. People who learn to multiply mentally usually do the opposite of what they do with paper-and-pencil. They start multiplying the "big numbers" first, and then add on the product of the smaller numbers. Watch James below:

To multiply 63×45 , first multiply 60×40 to get 2400. Then add on 60×5 or 300, and you have 2700. Then add on 3×40 or 120, and you're up to 2820. Next add 3×5 or 15, and you have 2835. So 63×45 is 2835.

Practice multiplying this way with 2-digit by 2-digit multiplication problems that you make up. When you turn in your paper, you can earn 4 stars by doing a problem like this.
